

Sizing criteria for Servopumps - SSP

For the sizing must refer to the following Tab.1 and Tab.2 tables, respectively, for servopumps SSP equipped with PGI pumps with cast iron body and pressure up to 330 bar, or PGIL with aluminum body for pressure (up to 250 bar) - see sizing example in section 1.1

Example machine cycle

STEP 1 - Pump sizing

The pump must be selected to satisfy the following equation:

$$\begin{cases} Q_{max,pump} > Q_{max,cycle} \\ P_{peak,pump} > P_{max,cycle} \end{cases}$$

where:

$Q_{max,pump}$ = maximum flow rate of the pump
 $Q_{max,cycle}$ = maximum flow machine cycle
 $P_{peak,pump}$ = maximum pump pressure
 $P_{max,cycle}$ = maximum machine cycle pressure

STEP 2 - Sizing of the electric servomotor and drive

The electric servomotor and the drive are selected according to the maximum average pressure $P_{med,SSP}$ that the servopump SSP can guarantee, according to the equation:

$$\begin{cases} P_{med,SSP} > P_{rms, cycle} \\ P_{med,SSP} > \frac{P_{max,cycle}}{2} \end{cases}$$

where:

$P_{med,SSP}$ = SSP maximum continuous mean pressure (see Tab.1 and Tab.2)

$$P_{rms, cycle} = \sqrt{\frac{p_1^2 \Delta t_1 + p_2^2 \Delta t_2 + \dots + p_n^2 \Delta t_n}{\Delta t_1 + \Delta t_2 + \dots + \Delta t_n}}$$

p_1, p_2, \dots, p_n = pressures [bar] in each phase of the cycle

$\Delta t_1, \Delta t_2, \dots, \Delta t_n$ = duration [s] of each phase of the cycle

The procedure described must be considered only for a preliminary sizing of the servopump.
For optimal sizing, use the S-SW-SIZING software. Download it from www.atos.com

1.1 Sizing example

Machine cycle data:

$Q_{max,cycle} = 140 \text{ l/min}$; $P_{max,cycle} = 290 \text{ bar}$; $P_{rms,cycle} = 200 \text{ bar}$;

STEP 1 - pump sizing

In the "Cycle data" column of the tables Tab.1 and Tab.2 identify the first row of Qmax, pump and Ppeak, pump values that are immediately higher than both machine cycle data:

$Q_{max,pump} > 140 \text{ l/min}$; $P_{peak,pump} > 290 \text{ bar}$;

In this case, the identified values that satisfy the machine cycle data are present only in Tab.1:

$Q_{max,pump} = 150 \text{ l/min}$ and $P_{peak,pump} = 300 \text{ bar}$, corresponding to the **PGI-2050** pump

STEP 2 - PMM servomotor sizing and combination with D-MP drive

In the row corresponding to the identified pump (PGI-2050), move to the right in the table until you find the value of Pmed, SSP that meets the condition:

$P_{med,SSP} > 200$;

$$P_{med,SSP} > \frac{290}{2}$$

In this case, the Pmed, SSP identified value is = 227

Moving along the column corresponding to the value of Pmed, SSP identified, it is possible to select:

the electric servomotor: **PMM-2042**;

the drive: **D-MP-090**

The complete code of the SSP servopump is therefore: **SSP-T-SP-**-2050-2042-090-*-***

Tab.1 - Sizing of the SSP servopump equipped with PGI pump (cast iron body)

CODE	CYCLE DATA		PGI PUMP Code	PMM MOTOR								
	$Q_{max,pump}$ (l/min)	$P_{peak,pump}$ (bar)		1009	1015	1024	1032	2042	2055	2080	2100
